

LEADING THE WAY IN ON-SITE PAINTING WITH MORE COLOURS THAN EVER

Leading on-site painting company, Advanced Coatings, one of AVKO Ltd's network of applicators, now offers construction product manufacturers an extended range of colour options.

A major difference in the service offered by Advanced Coatings compared with other on-site painting contractors is that they now offer every colour from the HPS 200 colour range, BS, RAL, NCS, Pantone and any special colour using the company's in-house spectrophotometer. They also offer metallic, structured and matt finishes.

This new development means that Advanced Coatings can meet any colour specification using high performance coating systems from the range of AVKO to coat a variety of surfaces. These include PVCu, powder coated, aluminium, mild steel, MDF, GRP, acrylic and is ideal for windows, doors and fascia cladding. Many of these surfaces cause the most difficulty to many standard contractors.

One of the main benefits of this service is that the work can be undertaken on site and therefore saves time and money. Also any mistakes can be rectified immediately.

Sadie Peeters, Managing Director, Advanced Coatings comments: "Using colour on windows, doors, cladding or conservatories is the ideal method which can help meet aesthetic regulations and add value through added style and visual appeal. Also the colour coating system used today, particularly for PVCu is very different from earlier attempts to 'paint plastic' and other coatings available on the market today. High tech coating from paint specialist AVKO offer permanent adhesion to PVCu and are both durable and waterproof making them a cost effective solution."

The service offered by Advanced Coatings is also ideal for assisting maintenance programmes. Faded windows and doors can be brightened up quickly, easily and more cost effectively.
